

EXTEND YOUR IN-HOUSE LAB

Lease test stations

APPROACH

In 1989 Bodycote Polymer began to offer its clients to lease test stations for carrying out hydrostatic pressure testing according to the clients' own choice of standards and test conditions. The leasing contract is very flexible; you can lease 10, 25, 50, 100 or more test stations on an annual basis, or any other time period.

OBJECTIVE

The aim of this concept is to give you fast and cost efficient testing of their materials and reporting of results. Within this concept we guarantee that the pipes will be started within 1 week from the day the material arrives. The results are easily accessed via Internet.

COST

We consider that our prices are competitive with your own in-house testing costs, with the added benefit of the results being accredited by an independent third part laboratory according to ISO/IEC 17025.

ONLINE ACCESS

You will have access to your test results via Internet. The database is updated twice every-working day.

HOW CAN YOU BENEFIT FROM LEASING?

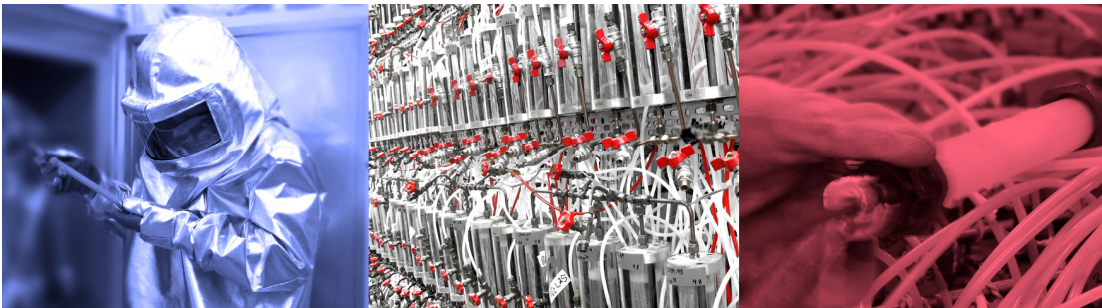

- Control point testing
- Screening tests
- Pre-tests for ISO 9080-evaluation
- Product development
- Batch release, process verification and audit testing

TEST CONDITIONS AND REQUIREMENTS

You provide us with:

- Test method
- Priority list
- Test environments
- Temperatures
- Hoop stresses (or pressure)
- Number of pipes to be tested

All programs and results will be kept confidential.
